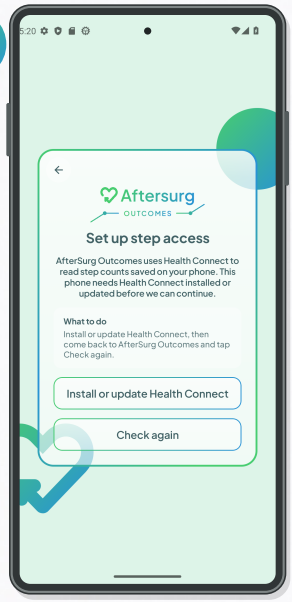
AfterSurg

Set up Health Connect

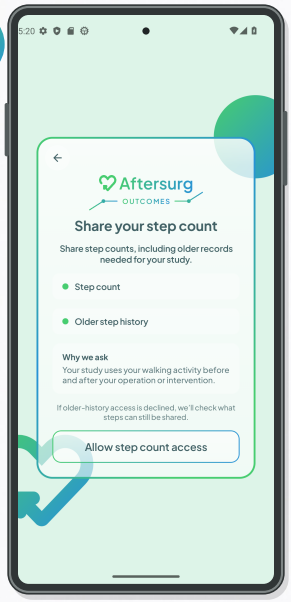
AfterSurg Outcomes

1



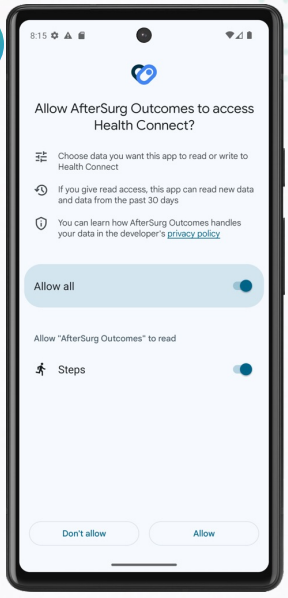
1. Install or update, if asked
Follow the link, return to Outcomes and tap **Check again**.

2



2. Share your step count
Tap **Allow step count access** to open Health Connect.

3



3. Allow Steps
Turn on **Steps** or **Allow all**, then tap **Allow**.

Before Health access

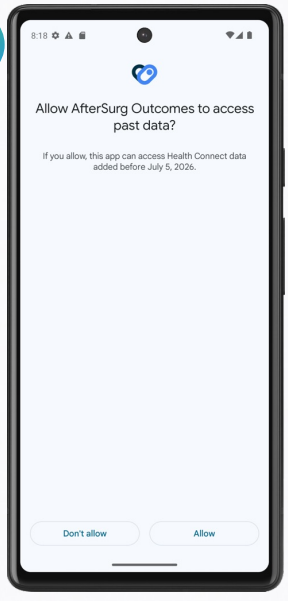
Study details first
Enter the details requested for your study.

Progress is saved
Return to finish your setup for the same study.

Older history
Allow it when your study needs older records and your phone supports it.

Health Connect cannot recreate steps that were never recorded.

4



4. Allow past data
If shown, tap **Allow** so Outcomes can check older shared steps.

Connection and data

Health Connect
It must be available on your phone.

Step-data access
Allow Outcomes to read your steps.

Study step data
Check the days and steps actually shared.

Your phone may skip permission screens that are already complete.

Your study details first
Complete the details requested for your study before Health access. Your setup progress is saved.

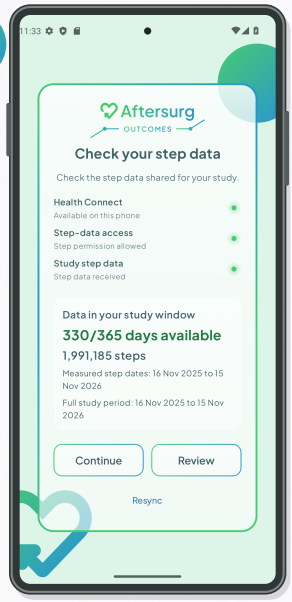
Prompts can vary
Some screens are skipped if access is already set up. Allowing access does not create step records.

AfterSurg

Check your study step data

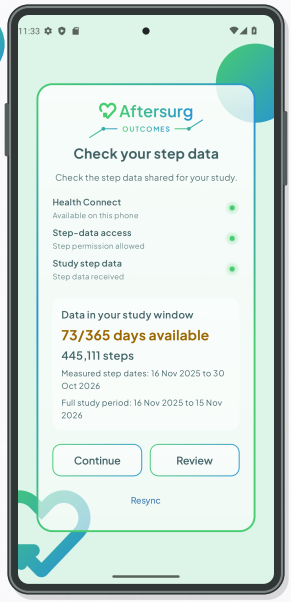
AfterSurg Outcomes

5



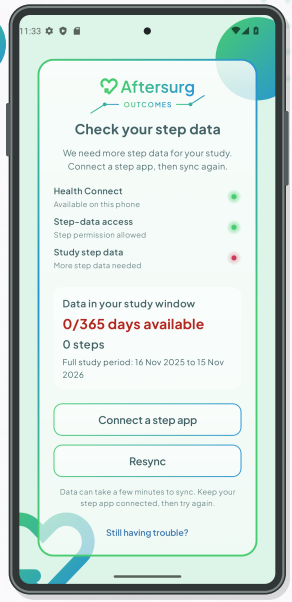
5. Review your study days
Check the days available and step total. Green means more than 80% of days have steps.

6



6. Amber coverage
At 20% to 80%, you can **Continue** or **Review** sharing to find more data.

7



7. Red coverage
Below 20%, connect a step app or tap **Resync**. You cannot continue with too little data.

Days in your study window

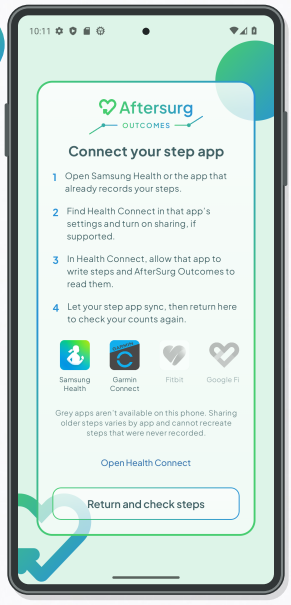
Green: above 80%
You can continue after a successful check.

Amber: 20% to 80%
You can continue or review sharing.

Red: below 20%
More step data are needed before you can continue.

The fraction uses your full configured study period, including future days.

8



8. Connect your step app
Follow the four steps. Let your app sync, then tap **Return and check steps**.

Before you resync

Sync your usual app
Let it update from your phone or wearable.

Check sharing
Your step app must share steps with Health Connect.

Return to Outcomes
Check again once syncing has finished.

Grey source-app icons cannot be opened on the example phone.

Realistic examples

These screenshots use artificial data across a full year. Your study dates and counts will differ.

Missing is not zero

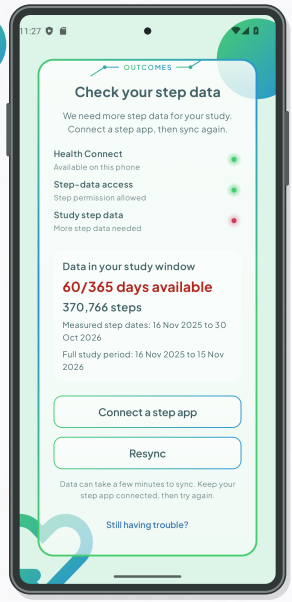
A missing record differs from a measured zero-step day. Access permission does not prove steps are available.

AfterSurg

Resync, get help and review your data

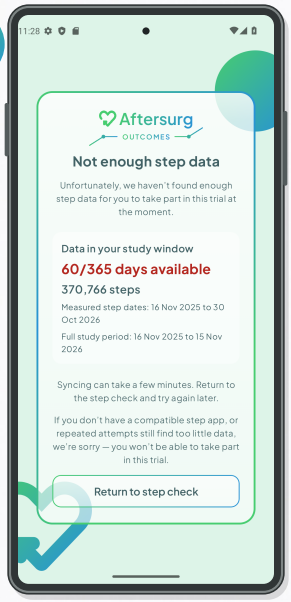
AfterSurg Outcomes

9



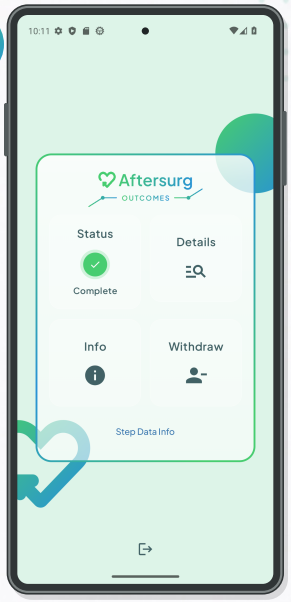
9. Allow time to sync
Tap **Resync** after your step app updates. Still stuck? Tap **Still having trouble?**.

10



10. Not enough step data
Read the guidance. Use **Return to step check** to try again after syncing.

11



11. Open Step Data Info
After setup, use the blue **Step Data Info** link on the main screen.

If you are still stuck

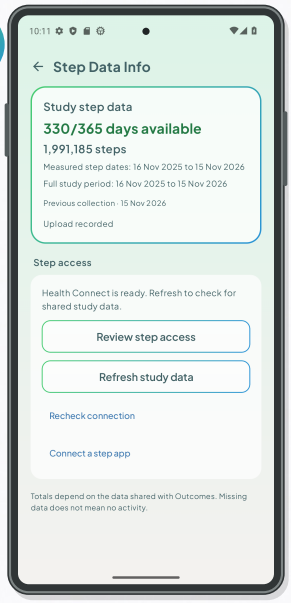
Allow time
Newly shared records may take a few minutes to appear.

Try again later
Return to the check after your step app has synced.

Repeated low results
Read the insufficient-data page for the trial guidance.

A failed or unfinished read is not a finding of insufficient data.

12



12. Review your saved data
Check study days, steps and upload status. Use **Refresh study data** when needed.

About saved summaries

Saved results
The summary shows your previous collection result.

Refresh study data
Update the collection summary when needed.

Need help?
Tell your study team the message shown and which app records your steps.

Upload status does not prove every study day has step data.

Try again later
Syncing can take a few minutes. You can return to the step check and retry when more data are shared.

If data remain insufficient
Without a compatible step app or enough shared step data after repeated attempts, you cannot take part in the trial.
